*Enjoy peace of mind with these mechanical guards
providing a 24/7 warning system.*

PRODUCTS

Roboguard

A battery-operated, dual-sensor, outdoor movement detector designed to detect intruders and wirelessly transmit the information to a Roboguard Base station.

Askari Wired Beam

A 180 degree, 18 meter dual wired beam. Connect straight to any alarm panel.

Portable Headquarters (HQ)

A portable 8-zone, 4-output, base-station is used to receive and announce signals from up to 8 Roboguard Sensors. The HQ can also be wired to a siren and/or an up-line alarm panel.

Alarm Interface

The Roboguard alarm interface is used to interface up to four Roboguards with individual intruder detect, tamper and status LED's.

Power pack

HQ interface to external devices such as a siren and/or alarm panel. A complete solution with 1.3A/h battery, 16VAC transformer, tele-cable, DC power to HQ and 5 relay out-put PCB.

Keypad

A 4-zone, 4-output fixed Roboguard base-station is used to interface Roboguards into an existing alarm panel. Also ideal for larger installations that require more than 8 guards.

Receiver

A separate receiver that provides the data stream for the Keypad and for the repeater station.

Transmitter

A Roboguard Transmitter is capable of transmitting roboguard intruder and roboguard remote alarms in response to triggering from externally connected systems.

Keyfob Transmitter

A handheld remote transmitter is used as a panic button and remote control for radio base-stations. 4-button and 6-button versions are available.

Roboguard uses state-of-the-art equipment and technology.

The entire system is wireless and simple to install and move.

The HQ monitors for tampering with the sensors, as well as battery levels.

The HQ can be connected to a siren or to any existing alarm panel and can be armed/disarmed by remote control.

The Roboguard sensor is weather proof, tamper proof, robust and impervious to lightning and ultra-violet light damage.

The Roboguard sensor can be positioned up to 400 meters from the HQ (and up to 800 meters with a booster).

The Roboguard will detect movement up to 20 meters away and has a detection arc of 110°.

Forewarned is forearmed!

**Peace of mind,
wherever
you need it**

**Robust
versatile and
reliable**

**Temporary or
permanent
asset protection**
